

Site Design

In addition to hosting I can offer top quality web site development. While there is no set "Site Package" I have broken things into three categories. Please read through each one and find which one best suits your needs. All sites will be custom and one of a kind.

You choose how involved you would like to be in the creation of the website. Training is available to explain how to keep your site up-to-date and add content (except on Basic).

As stated above if you only need a smaller site but want a feature in a larger package it can be added for a small fee. Basic

A basic site is a very small site with less than 5 pages of content. It has no member database or login features for site visitors. This package is best for a small business needing to describe their services or a simple blog. Includes very basic features such as an online poll. Basic Plus

A basic plus plan is for larger websites with a few more features than the Basic package. Features might include, but are not limited to the following:

- Member Database
- Newsletters
- Forum
- Sliding content (like on rgbhosting.com homepage)
- Image galleryeCommerce

An eCommerce site is a large step up from the Basic Plus package. This package allows a online store to be set up in addition to all of the features mentioned in the smaller packages. This requires a great deal of work and maintenance and could be subject to additional fees such as a dedicated IP address fee. Also the number of items is a large factor.
